

# Introduction to Informatics

Just the facts m'am:

Exam Questions

# Exam Schedule

- 17707 (M/W Class)

- Final Exam

- May 3<sup>rd</sup> (Wednesday)
  - 5:00-7:00 p.m.
  - **Ballantine Hall: BH 109**
- Extra Office Hours
  - Monday, Class time
    - Eigenmann 905

- 17712 (T/R Class)

- Final Exam

- May 4<sup>th</sup> (Thursday)
  - 2:45-4:45 p.m.

# The Nature of Information

## Symbols and Information Quantity

# Questions

- What is informatics?
- What is the difference between an “index” and an “symbol”?
- Examples of Analogue vs. Digital Information?
- How does Information Technology relate to semiotics?

# Technology

## Tools, Cyborgs and History of IT

Luis M.Rocha and Santiago Schnell

# Questions

1. Describe the Hertz Modelling Process
2. What are Boids and how do they work?
3. Propose a L-System Rule to draw the following artificial plant

# Data Representation

Pixels: picture elements

## Encoding the World

# Questions

- What is a positional number system? Give an example of a number system that is not positional, and an example of one that is positional.
- Convert 1001001101.01 from binary to decimal. Please show your calculations.
- What is the ASCII encoding of the word TURING (Uppercase) in Decimal?
  - 84 85 82 73 78 71
  - 73 78 70 79 82 77 65 84 73 67 83
  - 65 82 73 83 84 79 84 76 69
  - 65 83 67 73 73 50
- How many bytes do you need to encode a bitmap figure with resolution 300 x 600 using the RGB format?
  - 960,000
  - 180,000
  - 480,000
  - 540,000

# Deductive Modeling

## Logic, Sets, Deduction

**Logic: another thing that penguins aren't very good at.**

# Questions

- Build the truth tables of the following:
  - $\neg\neg a$
  - $a \wedge (b \wedge \neg a)$
  - $(a \Rightarrow b) \Rightarrow \neg b$
- Given a Universal Set  $X = \{0, 1, 2, 3, 4, 5\}$ , let  $A = \{0, 1, 2\}$ ,  $B = \{2, 3, 4\}$  and  $C = \{1, 2, 3, 5\}$ .
  - Show that  $(A \cap B) \cup C \neq (A \cup B) \cap C$
  - Express  $\{5\}$  in terms of  $A$ ,  $B$ , and  $C$  using set operations
  - Express  $\{2\}$  in terms of  $A$ ,  $B$ , and  $C$  using set operations

# Inductive Modeling

Statistics, Probability, Fitting Data,  
Induction

**DILBERT**

# Questions

- Over a 20-game period, the number of hits by a baseball player was
  - 1,2,0,0,1,2,2,1,0,0,4,0,1,1,3,2,1,3,0, and 1
    - Construct the Frequency distribution
    - In what proportion of games did he get at least 3 hits?
    - What is the mean, median, and mode
  - What is the line that best fits the data with the least squares criterion?
- A coin is tossed three times and an H or T (H= Head, T=Tail) is recorded each time.
  - List the elements of the sample space S and list the elements of the event consisting of
    - All heads
    - A head on the second toss
    - Two tails
  - Represent the sample space and the events above as a Venn Diagram
- One card is to be selected from an ordinary deck of 52 cards. Find the probability that
  - The selected card is an ace
  - The selected card is not a 9

# Uncertainty

## Hartley and Shannon Information

"Do you think they mean us?"

Luis M.Rocha and Santiago Schnell

# Questions

- What type of Uncertainty does the Hartley measure of uncertainty measure?
- What are the units of Shannon entropy?
- Does Shannon's information theory deal with the semantics and pragmatics of a message? Please explain why?
- If we have a symbol set  $X = \{A, B, C, D, E\}$  where the symbol occurrence frequencies are:
  - $A = 0.5$     $B = 0.2$     $C = 0.1$     $D = 0.1$     $E = 0.1$ 
    - If we know that a message is being sent in this language, what is the average minimum number of bits needed to guess the next symbol of the message?

# Algorithms

## Pseudo-code and Flow Charts

Luis M.Rocha and Santiago Schnell

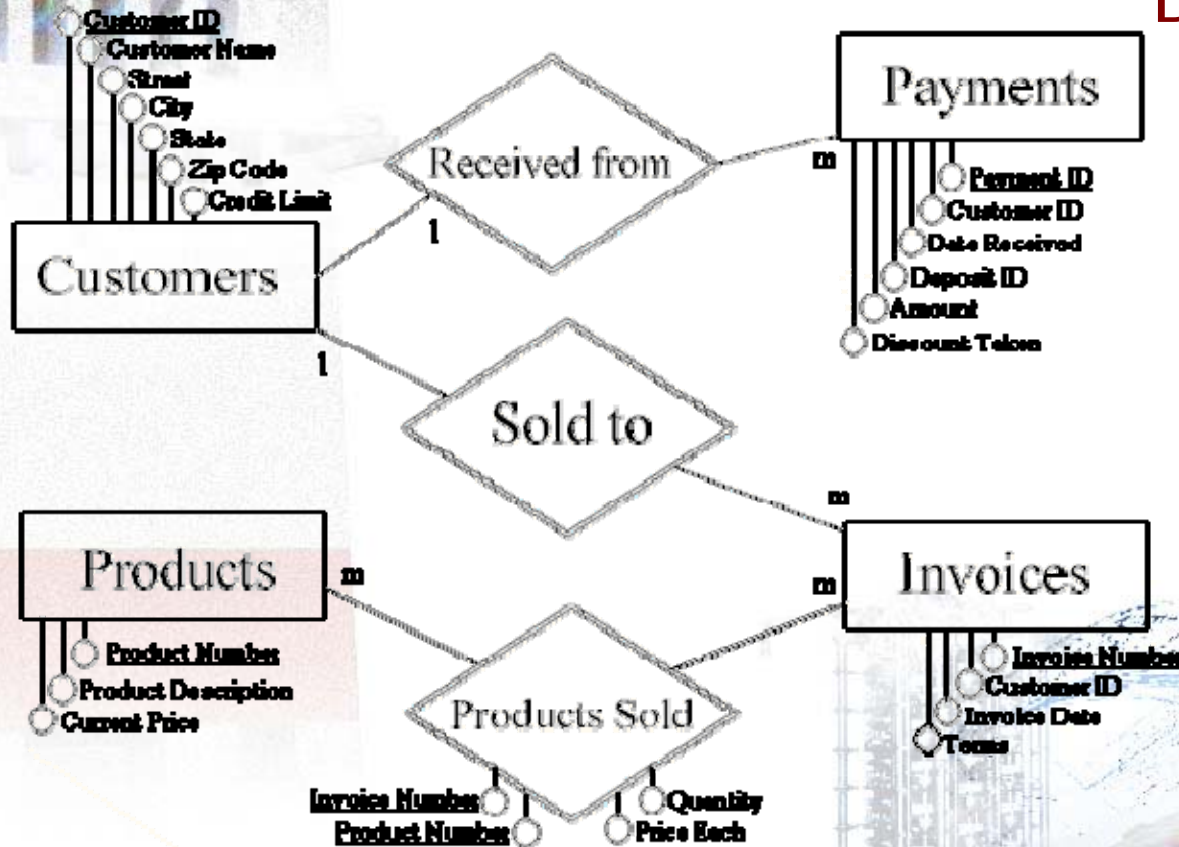

# Questions

- Using pseudo-code, write down an algorithm to calculate the tip of a restaurant bill and the amount that each person of a group of  $n$  needs to pay
- Consider the following recursive definition of a function:
  - $Q(n) = Q(n - Q(n-1)) + Q(n - Q(n - Q(n-2)))$   
for  $n > 2$
  - with  $Q(1) = Q(2) = 1$  .
    - Please write down a pseudo-code algorithm to calculate  $Q(10)$ .
- What is the Bremermann's Limit ?
  - Discuss its implications to problem solving and modeling

# Data Modeling

## Entity-relationship model and Relational Databases

# Questions

- The Santiago de Compostela historical society is setting up a database of the monarchs in the “unified” Spain. This is a chronological list of the people who have ruled “unified” Spain; the dates given are the periods of said rule.

- **Unified 'Spain'**

- **Habsburg Dynasty**

- 1516 - 1556 Charles I (Emperor Charles V) , King of Spain, Austria, Netherlands, Rome and Naples
- 1556 - 1598 Philip II, King of Spain, Portugal, Austria, Netherlands, Rome and Naples
- 1598 - 1621 Philip III, King of....
- 1621 - 1665 Philip IV
- 1665 - 1700 Charles II

- **Bourbon Dynasty**

- 1700 - 1724 Philip V
- 1724 Louis I
- 1724 - 1746 Philip V (2nd time)
- 1746 - 1759 Ferdinand VI
- 1759 - 1788 Charles III
- 1788 - 1808 Charles IV
- 1808 Ferdinand VII

- **French Rule**

- 1808 - 1813 Joseph Bonaparte

- **Bourbon Dynasty**

- 1814 - 1833 Ferdinand VII
- 1833 - 1868 Isabella II
- 1874 - 1885 Alfonso XII
- 1886 - 1931 Alfonso XIII
- 1975 - present Juan Carlos I

- The society has already decided to include the fields above. Please describe the entities and their attributes of each field in the database.
